Surgical sutures of the highest quality

SMI AG was established in 1987 - the first Belgian company manufacturing surgical sutures - since then it has grown continuously. Today SMI is recognised as a world-wide supplier of high quality surgical sutures and medical devices for human and veterinary medicine.

The company is situated in St. Vith in the East of Belgium, near the point where the borders of Belgium, Germany and Luxembourg meet.

[HIGHEST QUALITY AND SAFETY](#)

SMI complies always with international quality standards such as EN ISO 13485. All raw materials and finished products are submitted to stringent quality control by a highly qualified team.

SMI is dedicated to customer satisfaction by ensuring high quality products and an excellent service based on customer focus, reliability and delivery performance.

[WORLD-WIDE RECOGNITION](#)

SMI exports to around 100 different countries all over the world. For this performance SMI received the "Royal Export Award 2000" from the Belgian Foreign Trade Board.

[THE CATALOGUE](#)

This catalogue contains information about the most commonly used SMI veterinary products. On our website www.sutures.be you will find SMI's entire product range. Please take a look at these. We are constantly striving to increase our product range based on market developments and customer needs.

Since many years SMI products are recognized by veterinary surgeons around the world.

EC CERTIFICATE
FULL QUALITY ASSURANCE SYSTEM

We hereby certify that the under mentioned manufacturer has established and maintains a full quality assurance system according to the requirements of Directive 93/42/EEC, Annex II (with the exemption of section 4) and its transposition in Greek legislation, for the design, manufacture and final inspection of the products mentioned in this certificate. The certificate is subject to terms and conditions overleaf. Any significant changes in design or manufacture may render this certificate invalid.

Certificate Number: 301011861AD
This certificate is issued to replace certificate nr 301011861TN due to the addition of new products.

Manufacturer: **SMI AG**

Facility: **STEINERBERG 8, 4780 ST. VITH, BELGIUM.**

Products: 1. STERILE NON ABSORBABLE SURGICAL SUTURES.
2. STERILE ABSORBABLE SURGICAL SUTURES.
3. STERILE SURGICAL BLADES.
4. STERILE DISPOSABLE SKIN STAPLER.
5. STERILE DISPOSABLE SKIN STAPLE REMOVER.
6. STERILE SKIN MARKER.
7. STERILE SURGICAL POLYPROPYLENE MESHES.

Brand names: **As in annex**

Devices Classification: 1. IIb, 2. III, 3. IIa, 4. IIa, 5. Is, 6. Is, 7. IIb.

First issue date: 01/03/2021
Current issue date: 25/05/2021
Valid until: 24/05/2024
Audit report: 200011861

Type	Braided and coated multifilament	
Composition	Polyglactine 910, a copolymer made of 90% glycolide and 10% L-lactide	
Coating	Poly-glycolide-co-L-lactide and calcium stearate (<1%)	
Colour	Violet	
Tissue reaction	Minimal	
Absorption	The hydrolytic action by which the material is broken down results in total absorption between 56 and 70 days. Approximately 50% of tensile strength remain after 21 days.

Type	Monofilament
Composition	Polyglecaprone 25, a copolymer made of 75% glycolide and 25% ε-caprolactone
Coating	None
Colour	Violet / Beige - undyed
Tissue reaction	Minimal
Absorption	The hydrolytic action by which the material is broken down results in total absorption in approximately 90 to 110 days. Approximately 75% of tensile strength remain after 7 days.

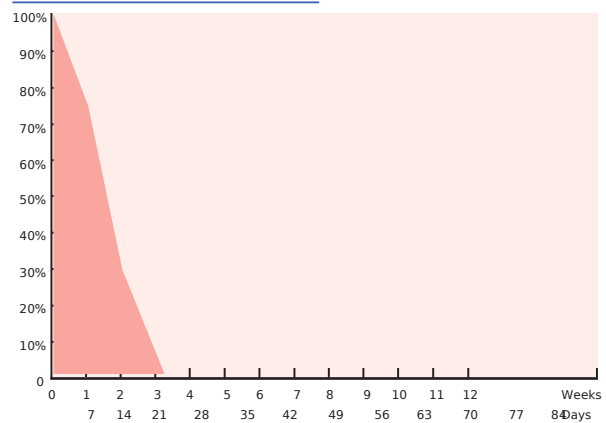

THE IDEAL SUTURE FOR UTERINE SUTURING DURING CAESAREAN SECTION.

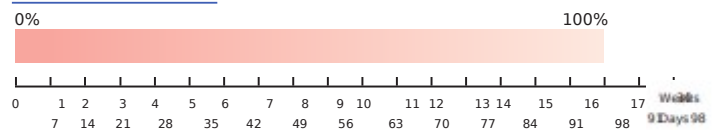

The faster resorption of SURGICRYL MONOFAST has a direct influence on fertility of the cow, a key factor in the profitability of beef production.

SURGICRYL MONOFAST is a significant development in modern veterinary medicine.

Type	Twisted multifilament with a monofilament appearance	
Composition	Strands of purified collagen taken from the serosal layer of selected bovines, Catgut Chrome tanned with chrome salts. Origin from BSE-free classified countries.	
Coating	None	
Colour	Ivory	Dark brown
Tissue reaction	Moderate	
Absorption	By phagocytosis. Complete mass absorption in approximately 60 days. Approximately 50% of tensile strength remain after 7 days. When used in infected tissues or in tissues with increased levels of proteolytic enzymes (stomach, cervix, vagina) it is more quickly absorbed.	By phagocytosis. The rate of absorption is slowed down by chromizing. Complete mass absorption in approximately 90 days. Approximately 50% of tensile strength remain after 14 days. When used in infected tissues or in tissues with increased levels of proteolytic enzymes (stomach, cervix, vagina) it is more quickly absorbed.

SILK BRAIDED BLACK

Type	Braided multifilament
Composition	Braided fibres from the cocoon of the silkworm
Colour	Black
Tissue reaction	Moderate
Absorption	Silk suture elicits an initial inflammatory reaction in tissues, which is followed by gradual encapsulation of the suture by fibrous connective tissues.

PTFE

WHITE

PTFE suture is a monofilament non-absorbable, extremely soft and smooth material composed of a strand of polytetrafluoroethylene (PTFE). This material is a synthetic fluoropolymer of tetrafluoroethylene that is very strong, knots well and biologically inert.

E - FIBER UHMWPE

Ultra High Molecular Weight Polyethylene

E FIBER is a medical grade braided sterile surgical suture prepared from Ultra High Molecular Polyethylene (UHMWPE) and Polyester. E Fiber is a non absorbable braided suture that provides flexibility and strength superior to most other suture materials.

BENEFITS:

- ✓ **High purity, medical grade Ultra-High-Molecular-Weight Polyethylene fiber provides flexibility and unmatched strength**
- ✓ **Unique braid construction has better knot break strength than polyester suture with a long chain polyethylene core**
- ✓ **Lubricious design allows each knot to slide for smoother, more efficient performance**
- ✓ **A flatter surface allows each knot to lock against the previous, providing superior knot security**
- ✓ **Unique braiding with a blue tracer provides improved visibility**

Displaced abomasum set

TROCAR

The two-piece trocar, consisting of cannula and pin, is made of stainless steel. The pin is provided with a notch, which simplifies the drainage of liquids and gas. The handle is designed so that it fits well in the hand and cannot slip away. The cannula has 2 holes on the upper plate for easy attachment.

Technical details

- Stainless steel
- Cannula length 110 mm, Ø 5 mm (inside)
- Pin 112 mm long with a sharp tip

	Unit	Order No.
Trocar for toggle placing	1 pc.	Z031

LEFT DISPLACED ABOMASUM SUTURES

The Toggle Set was designed for the Grymer / Sterner abomasal relocation method and is available with either polyester or Supramid threads.

COMPOSITION:

- Polyester thread 330 mm long + inox toggle 33 mm long, Ø 4 mm
- Supramid thread 330 mm long + inox toggle 40 mm long, Ø 4 mm

BENEFITS:

- The penetration of the Trocar opens the abdominal cavity only minimally*
- Location of abomasum can be determined*
- Often you get by without much instrumental effort*
- Rapidly executable*
- Antibiotics are rarely needed*
- Cost-efficient*

Toggles suture set	Unit	Order No.
Polyester 6 x 2 tubes	1 pc.	Z030
